Dining table Watson-Obbi set of 3 pakoworld pe brown-metal 70x70x70cm Do you want a durable dining set for your balcony or garden that will aesthetically upgrade your space? The Watson-Obbi series is ideal for you as it combines aesthetics with build quality. The set consists of two armchairs and a table. Technical Specifications: Stable Frame: Made of metal, resistant to stress and wear. Main Body of Chair (Seat-Back): Constructed from high-quality PE rattan. PE rattan is a type of eco-friendly synthetic rattan, recyclable and more durable compared to other types. Table Surface: Made of 5mm tempered clear waterwave glass. Stackable: Offers ease of transport and storage. High Durability: Suitable for outdoor use, exposed to weather conditions and humidity. Color: Available in brown. Product Dimensions: Table Dimensions: Length: 70 cm. Width: 70 cm. Height: 70 cm. Chair Dimensions: Length: 54 cm. Width: 56 cm. Height: 73 cm. Seat Height: 42 cm. Material Information PE Rattan: PE rattan, a popular material that mimics natural rattan, is commonly used in the construction of furniture and accessories. Made from polyethylene, a durable synthetic polymer resin, PE rattan is weather-resistant and does not degrade from exposure to sun or rain. It retains its color and does not fade, making it an excellent choice for both indoor and outdoor use. Additionally, PE rattan is environmentally friendly, contributing to sustainable practices in manufacturing and product longevity. Tempered glass - Safety glass: Tempered glass, also known as toughened or thermally processed glass, is a type of safety glass that has undergone special treatment to increase its strength compared to ordinary glass. The thermal processing involves heating the glass to a high temperature and then rapidly cooling it. This creates a compression stress on the surface of the glass and a tensile stress inside, making it more resistant to impacts, thermal shocks, and scratches. It is about 5 times more impact-resistant than ordinary glass. A significant advantage is that in case of breakage, tempered glass shatters into small, blunt fragments, reducing the risk of serious injury. It is used in tables, desks, TV furniture, etc. Waterwave Glass: Also known as corrugated glass, Waterwave glass is a type of decorative glass characterized by its unique wavy patterns. The surface of Waterwave glass is crafted using a special technique that creates a three-dimensional texture, reflecting light in an interesting way. This unique material adds a distinctive character to any environment where it is used. Despite its texture, it remains transparent, allowing natural

light to pass through. Metal: Metal is widely used in furniture construction, offering several advantages over other materials. It is extremely resistant to wear, ideal for furniture intended for daily use in a demanding environment. It maintains its shape and structure perfectly, ensuring stability and longevity. Besides the properties mentioned above, metal can also have other characteristics, such as antimicrobial action (copper) or superconductivity (molybdenum).

Maintenance Instructions: PE Rattan: This material is easy to maintain and clean. Simply wash it with water and mild soap. Use a soft brush or cloth to gently scrub away dirt and debris. Rinse thoroughly with clean water and allow it to air dry. Regular cleaning will help maintain its appearance and extend its lifespan. Tempered glass: Initially, use a soft damp cloth and a mild detergent or just water. Apply the cloth to the tempered glass and clean it with gentle circular motions. Avoid using excessive pressure and materials that may cause scratches. Waterwave Glass: Use a mild detergent, such as dish soap or simple soap, diluted in warm water. Dip a soft cloth or sponge into the solution and gently clean the surface of the glass. Avoid using strong detergents or ammonia, as they may damage the glass surface. Metal: For any indoor metal, dusting or wiping with a damp cloth regularly is recommended. However, for outdoor metal furniture, follow these steps: For extended protection, apply protective cream, easily available in stores, to your metal furniture. If your furniture is processed and painted with powder-coating, it is very durable and can be cleaned easily with a damp cloth. If your metal furniture is not powder-coated, you need to be more careful and keep it away from water and humidity. You can cover them with special covers and, if possible, place them indoors during winter. If you notice rust, remove it with turpentine, then apply anti-rust varnish before painting the surface with oxidation-resistant paint. Remarks: The armchairs are delivered assembled while the table needs assembly. The color of the product may differ slightly from how it is displayed on your screen.
