Height: 120 cm. Cushion dimensions: Length: 40 cm. Width: 30 cm. Height: 30 cm. Overall cot dimensions Length: 106 cm. Width: 103 cm. Height: 200 cm. Material Information: PP - Polypropylene: Polypropylene (PP) is a thermoplastic material widely used in various fields due to its excellent properties. Despite being lightweight, it has high impact resistance, making it suitable for applications requiring durability against shocks and abrasions. It retains its properties even when exposed to moisture, making it ideal for applications in high-humidity environments. Metal: Metal is widely used in furniture construction, offering several advantages over other materials. It is extremely resistant to wear, ideal for furniture intended for daily use in a demanding environment. It maintains its shape and structure perfectly, ensuring stability and longevity. Besides the properties mentioned above, metal can also have other characteristics, such as antimicrobial action (copper) or superconductivity (molybdenum). Fabric: Fabric is a versatile material made by weaving, knitting, stitching, or bonding fibers together. These fibers can be natural, such as cotton, wool, or silk, or synthetic, such as polyester or nylon. The weaving of fibers creates a network that gives the fabric its properties, such as strength, softness, breathability, and elasticity. There are countless varieties of fabrics, each with its own unique characteristics and uses. Maintenance Instructions: PP Polypropylene: For daily cleaning of polypropylene, use a soft cloth or sponge lightly moistened with mild detergent and warm water. Apply the cloth to the surface and clean with light pressure. Metal: For any indoor metal, dusting or wiping with a damp cloth regularly is recommended. However, for outdoor metal furniture, follow these steps: For extended protection, apply protective cream, easily available in stores, to your metal furniture. If your furniture is processed

and painted with powder-coating, it is very durable and can be cleaned easily with a damp cloth. If your metal furniture is not powder-coated, you need to be more careful and keep it away from water and humidity. You can cover them with special covers and, if possible, place them indoors during winter. If you notice rust, remove it with turpentine, then apply anti-rust varnish before painting the surface with oxidation-resistant paint. Fabric: The maintenance of fabric depends on various factors such as the type of fiber, fabric construction, and its use. Use a mild detergent that is suitable for the type of fabric. Avoid using bleach or whitening agents, as they can damage the fibers. Remarks: The product is delivered unassembled, in factory packaging, and with detailed assembly instructions. The color shade of the product may slightly differ from its photographic representation on your screen.
